

ECR Post Implementation - Clinical Staff

Emergency Departments LEading the transformation of Alzheimer's and Dementia Care, or ED-LEAD for short, is a large-scale pragmatic randomized control clinical trial focused on improving emergency care and follow-up for persons living with dementia and their care partners through evidence-based clinical programs.

This is a questionnaire designed to be completed by clinical staff within the Emergency Department. The tool includes questions to assess ED-LEAD clinical decision support tools perceived usefulness and acceptance.

When completing the questionnaire, you can leave blank any questions that you do not want to answer. Remember that your responses are strictly confidential and will be closely guarded. Please try to answer all of the questions.
